# **Gentium Plus Font Features**

Gentium Plus is an OpenType-enabled font family that supports the Latin, Cyrillic, and Greek scripts. It includes a number of optional features that may be useful or required for particular uses or languages. These OpenType features are primarily specified using four-letter tags (e.g. 'cv17'), although some applications may provide a direct way to control certain common features such as small caps. This document lists all the available features.

To learn how to access these features for web pages or in individual apps, please see Using Font Features.

This page uses web fonts (WOFF2) to demonstrate font features and should display correctly in all modern browsers. For a more concise example of how to use Gentium Plus as a web font see Charis SIL Webfont Example. See Using SIL Fonts on Web Pages: OpenType and Graphite feature support for more information.

If this document is not displaying correctly a PDF version is also provided.
